Databases (Advanced)

The following is the Syllabus for *Databases (Advanced)*, which provides the basis for the module's theory and practice-based test. The Syllabus is over and above the skills and knowledge contained within ICDL Databases. Databases (Advanced) anticipates that the candidate has already acquired the skills and knowledge outlined in ICDL Databases.

Module Goals

Advanced Database requires the candidate to understand key database concepts and use a relational database application to create an advanced database structure and outputs.

The candidate shall be able to:

- Understand key concepts of database development and usage.
- Create a relational database using advanced table creation features and complex relationships between tables.
- Design and use queries to create a table, update, delete and append data. Refine queries using wildcards, parameters and calculations.
- Use controls and subforms to enhance forms and improve functionality.
- Create report controls to perform calculations. Create subreports and enhance report presentation.
- Enhance productivity by working with macros and use linking and importing features to integrate data.
